Syracuse Research Corp. awarded AFRL contract

by *Fran Crumb, Information Directorate*

ROME, N.Y. — The Air Force Research Laboratory has awarded a \$249,955 contract to Syracuse Research Corp. of North Syracuse for a study on future radar technology. The agreement, “Cohering Multiplatform Sensors with RF Tags,” extends over a 30-month period.

“The objective of the program is to develop techniques to use radars on multiple aircraft as a single radar system,” said John E. Maher, program manager in AFRL’s Sensors Directorate at Rome. “The radio frequency tags transmit signals that can be used to tie the radars on the separate aircraft together.”
